

In most cases we do not want to send the commercial information from the automation system to display on the various devices and services but we need to tell the streaming service a commercial is playing to trigger commercial substitution. To do This:

1. In CSRDS Select Properties from the Tools Menu
2. Select the Input Sources tab and select Send Sponsors
3. Click the Green Categories command and ensure all of the commercial categories are entered as commercials
4. Select the RDS\RBDS Tab and select Do Not Send Sponsors
5. Select the FTP/File Output tab and select DO Not Send Sponsors
6. Select the HD/IP Output Tab
 - a. In the top "streaming" portion leave the Do No Send Sponsors UNCHECKED
 - b. In the bottom HD portion select Do Not Send Sponsors
7. Click OK to save the settings and return to the Main Controller Window
8. Click F5-Start to put CSRDS back on-line

Once set, when CSRDS gets an event in a commercial category it will send the static/promo message to the RDS, HD, Web, etc and send a commercial event to the stream activating the alternate audio. This will be repeated until the spot set is over and a promotional message or song is posted returning the stream to the live broadcast.
